

Hope Artificial Intelligence

Scenario Based Learning

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

A) How will you achieve this in AI?

B) Find out the 3 -Stage of Problem Identification

C) Name the project

D) Create the dummy Dataset.

Solution:

- A) Predict the employee salary, environment, project satisfaction and increment
- B) 3 – Stage of Problem Solution
 - Machine learning – based on number of employee (Numbers)
 - ML - Supervised Learning
 - ◆ We have inputs(emp name, Salary, location, domain, satisfaction and increment)
 - ◆ Output – interested or not interested
- C) Company Employee satisfaction list
- D) Data Set:
 - emp name, Salary, satisfaction and increment
 - 7emp - 20,000 – not interested
 - 3 emp – 40,000 – Interested
 - 5emp – 50,000 - interested
